MATERIALS

CONCRETE

TYPES OF CONCRETE

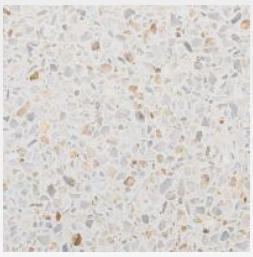
#11 GREY CONCRETE

#12 WHITE CONCRETE

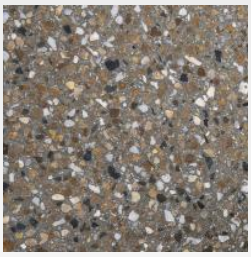
High quality grey or white Portland cement is used in the production of the high performance concrete (HPC) in combination with natural marble or granite aggregates and inert materials. Concrete structure is reinforced. Concrete is recyclable due to the absence of resins and adhesive polymeric agents.

NATURAL MARBLE AGGREGATES

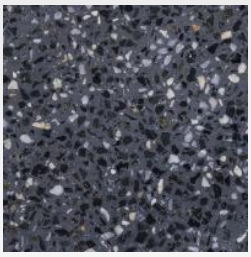
POLISHED AGGREGATE - LARGE STRUCTURE



#21 WHITE

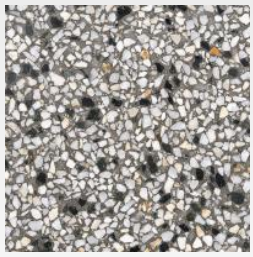


#22 BROWN

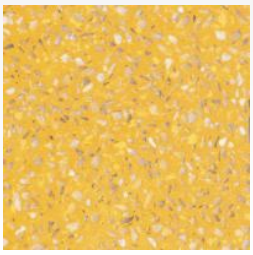


#23 BLACK-SCATTER

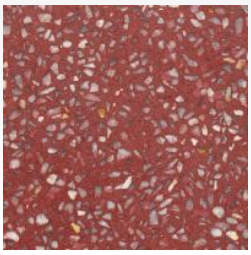
#24 SCATTER



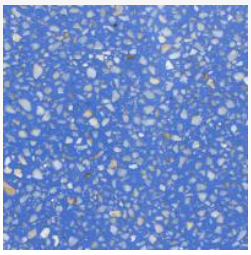
#25 GREY



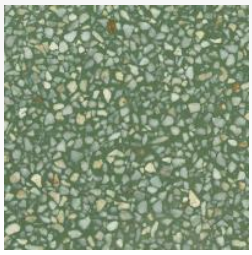
#26 YELLOW



#27 RED



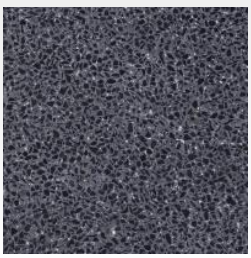
#28 BLUE



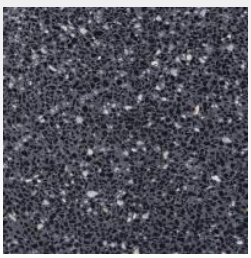
#29 GREEN

POLISHED AGGREGATE - SMALL STRUCTURE

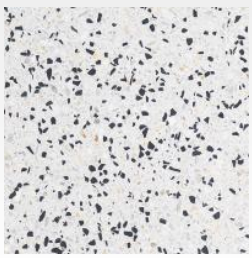
#31 WHITE



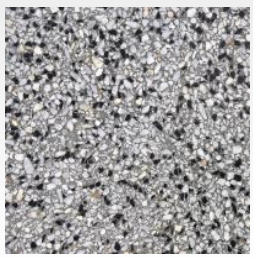
#32 BLACK



#33 BLACK-SCATTER



#34 SCATTER



#35 GREY

Polished surface : treatment performed either mechanically or manually, removing the surface layer and revealing the homogeneous structure of the material. This type of treatment creates a characteristic shiny and bright look.

EMBOSSED AGGREGATE - LARGE STRUCTURE

#41 WHITE

#42 BROWN

#43 SCATTER

#44 GREY

EMBOSSED AGGREGATE - SMALL STRUCTURE

#51 WHITE

#52 SCATTER

#53 GREY

Embossed surface : treatment performed either mechanically or manually. This type of processing allows the natural marble or granite aggregates to stand out and emphasize the depth of the structure.

The aggregates are a mixture of multi-colored, natural, marble or granite stone fractions with Portland cement and inert materials. The particles have selected structural characteristics and are available in various combinations with grey or white Portland cement, depending on their properties and requirements for the manufacture of the products.

The additionally applied impregnant and lacquer finish give the product excellent anti-corrosion, UV protection and a refined finish.

WOOD/TIMBER

SOFTWOOD - PINE (SPRUCE)

#61 PINE COLOR

#62 WALNUT COLOR

#63 MAHOGANY COLOR

#64 ROSEWOOD COLOR

#65 OAK COLOR

Spruce is offered as solid wood with a selected part of the structure of the tree. The wood is treated with a water-based pigmented impregnator. Color range is selected and ordered upon request by the customer and is available in the following options: pine color, walnut color, mahogany color, rosewood color, oak color.

HARDWOOD – BAMBOO, IROKO

#66 BAMBOO

#67 IROKO

Hardwood is available on request and HFS reserves the right to choose the most appropriate type of hardwood depending on the product and the availability of the relevant type of exotic wood on the market.

- **Bamboo** wood is heat-treated and highly compressed during the special production process. As a result of this process, a material with extremely high technical strength and durability characteristics is obtained. It is designed to withstand extreme loads. The product is carbonized and special care oil coated. The company HFS offers rhythmic deliveries of this type of raw material and is a preferred product because of its characteristic
- **Iroko** is treated with oil and varnish for a better aesthetic appearance, but is also weather resistant without coating due to the high density and hardness of the wood.

Wood is a natural material and every beam/plank is not identical to the others, and there may be slight differences in the appearance of the woodthread, the tone and the natural imperfections, despite the processing. As the weather changes (hot climate, dry climate, humid climate, cold climate), the wood structure changes and can increase or decrease its volume, causing cracks or ssures. Although it is a natural process, it should be noted.

To minimize the effects of weather conditions, the boards are treated with high-performance impregnants and water-based varnishes that extend the life of the wood and slow down the aging of the material.
This procedure does not cancel the subsequent periodic maintenance of the timber in order to keep its quality for as long as possible.

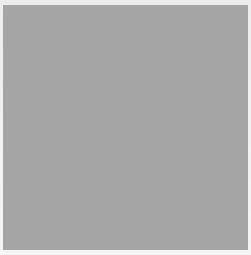
Depending on the type of wood, a certain color range is available, which is ordered upon request by the client. HFS works with FSC certi ed timber. The timber is delivered to the end user without the need of subsequent mechanical treatment.

METAL

STEEL

RAL 7024

RAL 9007



RAL 9006

RAL 3001

RAL 9005

RAL 1021

RAL 5015

RAL 6032

The company HFS uses polyester paints with a pearl matte effect as standard, which provide a textured opaque coating. To compare relative RAL colors, use the commercial RAL palette. Colors outside the specied color range of HFS are subject to an additional charge.

Processing of steel elements of different thickness and of different brands, depending on the speci cation of the product, goes through the following steps:

- cleaning of the steel with a shot blasting machine
- electrogalvanization
- application of zinc ester-epoxide hybrid primer *****
- application of electrostatic solid powdered polyester

(*****) Recommended as additional protection for products to be placed in areas with humid and / or marine climate. This treatment repeatedly increases the corrosion resistance of the steel and is subject to additional payment (on request only).

STAINLESS STEEL

#81 INOX

HFS uses AISI 304 stainless steel.

CHARACTERISTICS AND MAINTENANCE

Not all products are available in all types of treatments and coatings. To check the types of treatments and coatings available for each product, please see the section on the specic product.
The higher weight products are with stainless steel threads (dowels), where ring bolts can be fitted for ease of installation and transportation.
To keep the product's appearance unchanged for a long period of time, we recommend cleaning of the products with water and a suitable detergent and periodically impregnated.
For more information on our products, contact the company.
