URBAN DESIGN

DES MOBILIERS POUR DES PAYSAGES URBAINS INTELLIGENTS

L'espace urbain est un organisme complexe qui évolue constamment, le produit des interactions entre l'homme et l'environnement. Des interactions pas toujours facilement décodables, pas toujours conscientes, mais qui traduisent la ville en une multitude de nouveaux horizons urbains fascinants mais pas toujours à l'échelle humaine.

L'espace urbain que nous avons en tête, l'espace "ordinaire" dans lequel nous nous déplaçons tous les jours, est un espace que nous voulons non seulement décoder et comprendre, mais c'est aussi un espace qui nous surprend, qui devient chaque fois "extraordinaire".

Un espace qu'à tout moment nous pouvons reconnaître comme notre "paysage urbain". Le paysage urbain, comme nous voudrions l'interpréter, est composé d'objets dont la fonctionnalité, véhiculée par une étude attentive des formes et des couleurs, se traduit également par une forte attitude "intelligente". Dans ce scénario, nous aimons imaginer nos produits, de la conception à la réalisation, comme des artefacts destinés à soutenir une expérience : l'immersion complète de l'homme dans cette merveilleuse complexité que nous offre l'espace urbain contemporain. Un espace qui devient ainsi le paysage unique et extraordinaire de chacun de nous.

Aluminium, respectueux de l'environnement et recyclable

Aluminium éco recyclé et recyclable

La grande durabilité de l'aluminium dans le temps et la possibilité de le recycler à 100 % sans perte de qualité ont permis de définir le "matériau vert". Son extraordinaire résistance est combinée aux propriétés anti-corrosion et au faible entretien requis.

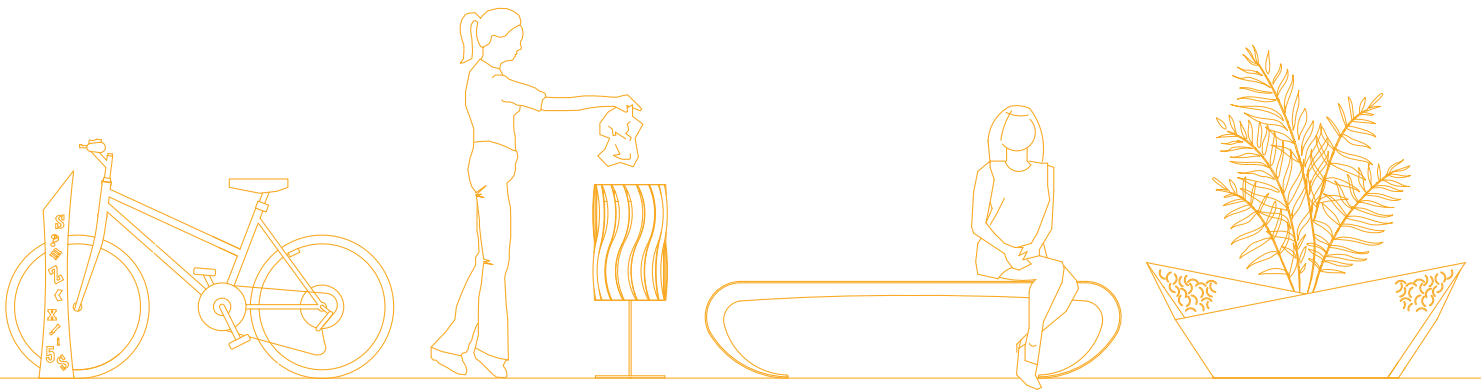

LE RECYCLAGE :

Près de 75 % des produits en aluminium fabriqués dans le passé sont encore utilisés aujourd'hui ; cela s'explique par le fait que l'aluminium peut être réutilisé pour le même usage, encore et encore. Tout ceci contribue à la création d'un bassin de disponibilité du matériau en réassortiment continu. Contrairement à d'autres matériaux, l'aluminium ne perd pas ses caractéristiques et ses particularités au cours du processus de recyclage.

En outre, le recyclage ne nécessite que 5 % de l'énergie utilisée à l'origine pour la production, ce qui permet d'économiser 9 tonnes d'émissions de CO₂. Le recyclage des déchets d'aluminium permet actuellement d'économiser environ 80 millions de tonnes de gaz émis chaque année dans l'atmosphère.

Conçu pour vivre l'espace public en accord avec notre philosophie d'une ville positive et durable, le banc Elios Smart est l'excellence née pour offrir aux utilisateurs une expérience toujours plus complète.

Nous avons combiné un banc de conception moderne avec de nouvelles solutions technologiques, telles que l'approvisionnement en énergie renouvelable, la recharge des appareils informatiques, l'éclairage intelligent et la connexion à Internet.

Nos bancs font l'objet d'une surveillance télématique constante et toutes les fonctions peuvent être contrôlées via notre portail web intuitif, directement par le client final.

Elios, dans sa version standard, ne nécessite aucun câblage électrique supplémentaire et la seule exigence d'installation est une zone extérieure. Tous les composants électroniques sont enfermés dans des boîtiers étanches et les points de connexion sont sécurisés et étanches.

Il est sûr car il est contrôlé par des capteurs qui le protègent des courts-circuits, et tous les composants sont réglementés par les strictes normes européennes, ce qui garantit au produit le marquage CE.

Avec ses dimensions compactes et son design attrayant, Elios est un banc qui s'adapte à tous les besoins, s'intégrant complètement au contexte urbain.

ELIOS

SMART BENCH

Conceived to live the public space respecting our philosophy of positive, sustainable city, the Elios Smart bench is the excellence born to offer the user an increasingly complete experience;

We have combined a modern design bench with new technological solutions, such as renewable energy, IT device charging, intelligent lighting and connection to the Internet.

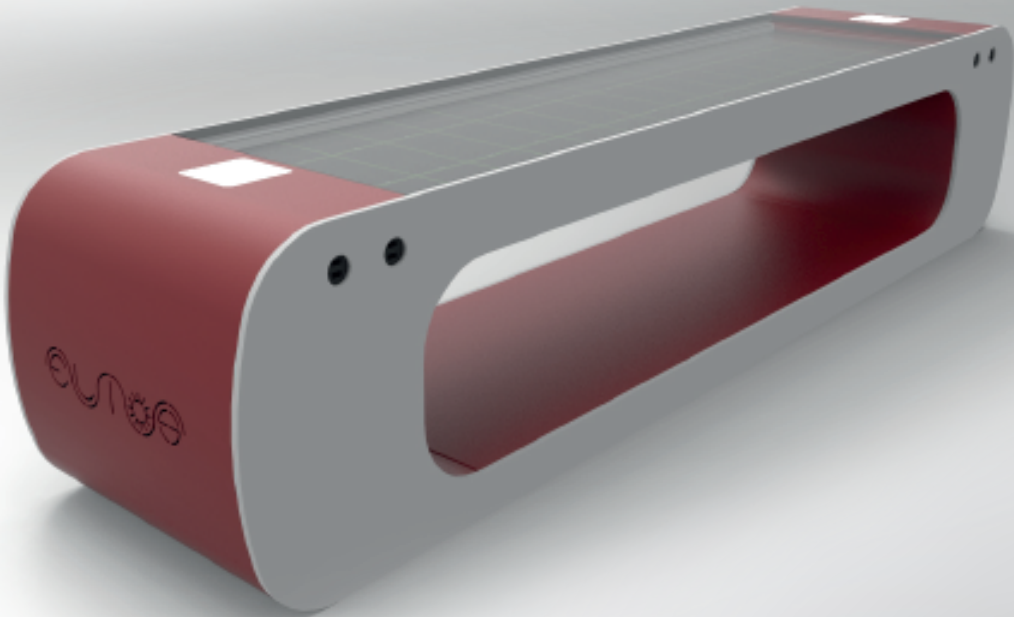

Our benches are constantly monitored electronically and all functions can be controlled through our intuitive web portal, directly from the end customer. Elios, in its standard version, requires no additional electrical wiring and the only installation requirement is an outdoor area. All the electronic components are enclosed in sealed enclosures and the connection points are safe and resistant to atmospheric agents.

It is safe because it is controlled by sensors that protect it from short circuit, and all the components are regulated by the strict European standards, guaranteeing the product the CE marking.

With contained dimensions, and with an attractive design, the Elios is a bench that adapts to all needs, being completely incorporated into the urban context
